

Prior Stress Tests (Tests 3-4 Layer B)

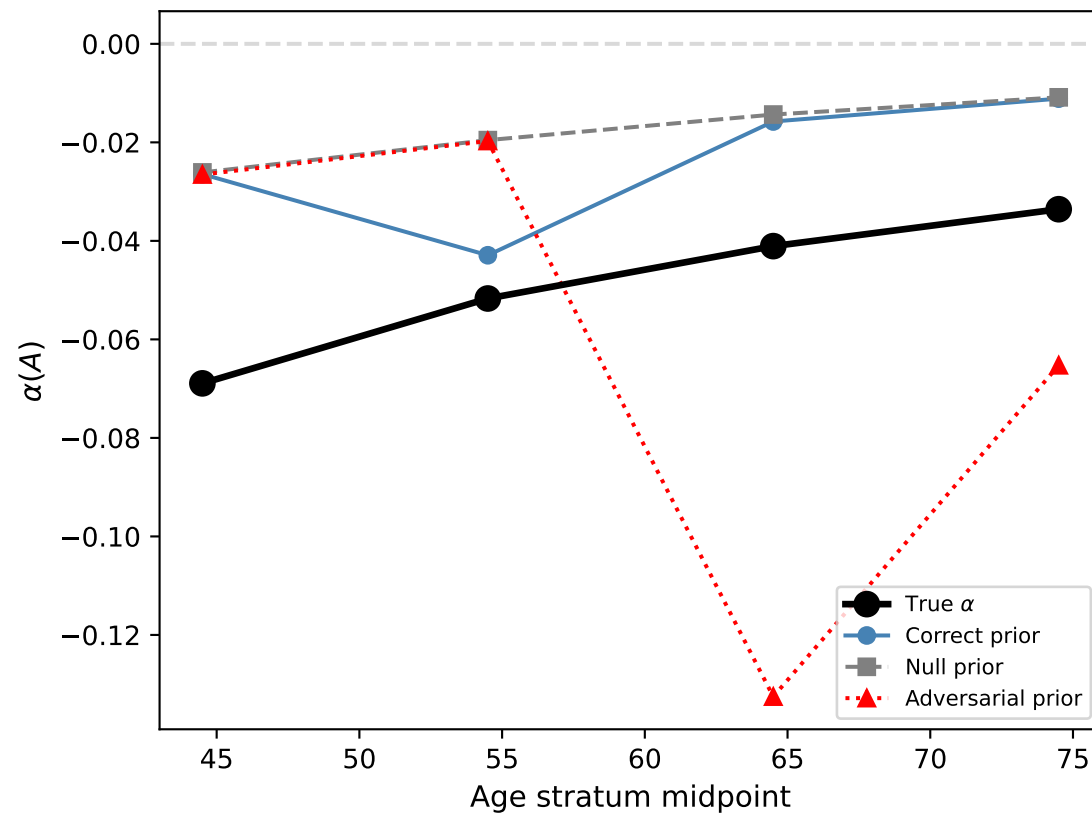

(a) Off-diagonal sign concordance by prior condition

(b) Lyapunov residual norm

(c) $\hat{\alpha}$ by prior condition vs true α

PRIOR STRESS TEST VERDICT

Mean concordance (correct prior): 0.771
 Mean concordance (null prior): 0.542
 Mean concordance (adversarial): 0.292
 Mean Layer A (Γ) concordance): 0.500

PRIOR CONTRIBUTION:
 correct - null = +0.229
 (Sign prior improves estimation)

DATA CONTRIBUTION:
 null - chance = +0.042
 (Data alone above chance)

Layer A operates WITHOUT Q or A
 estimation - pure covariance sign
 concordance with compiled J.
